

MAX'S SPACE ADVENTURE

My first project, the Photoshop Final, was focused primarily on using color from an environment that seemed fictional and making it work together. I used images of people's interpretations of another planet, rainbow mountains from earth, and an image of my brother's pet macaw, Max. His colors and the colors in the background were not all complimenting colors, so it was fun to make them work in a way that made it looks colorful and still as "natural-looking" as I could get it. However, nothing looks natural about a macaw in deep space.

LET'S GO TO MARS LIKE WE PLANNED

YEAH, MAN. EARTH IS HELLA DANGEROUS

DUDE, WHY DID WE COME HERE?

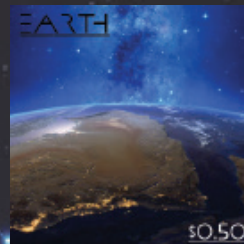

PLANET EARTH WELCOMES YOU
TO SPRING BREAK 2019

THIS PLACE SEEMS AIGHT.

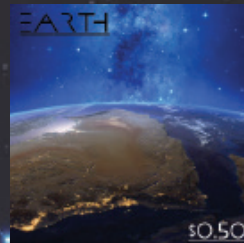

Being a fan of space this summer, who knows why, I decided to use the idea of aliens coming to earth for spring break. I have no idea I did not put "Summer break 2018" instead of "Spring Break 2018" but I guess to an alien, I am already saying gibberish like 'Spring Break'. Anywho, it also is just hilarious for us to think aliens are dangerous but in this image, they are clearly the ones saying earth is dangerous. I enjoyed the shaping and coming together of the space ships and the alien's body. it's like a puzzle of my own creation. The more intricate and detailed at this point, where it was about shapes more than images/ objects.

The Time-based Media was a challenge but it was fun! This is a continuation of Phil, the alien, and his hope to find the perfect vacation spot. I had trouble with masking and making sure it was in the right layer to make the “beaming down” effect. However, I know that I really enjoyed learning how to make a bsica animation. It was tricky because of the bright colors and making sure things stood out and didn’t look like a crazy rainbow fiasco. It came out alright and thankfully Phil was bright green and stood out!

MARS IS WAITING FOR YOU. COME VISIT: SUMMER 2040

This postcard is just for fun.

“Hello! We are enjoying our stay here. It is not like earth but it really has true potential to hold life for travelling and for living. We hope to come back and visit Earth, as we settle into our new Podhome. Hopefully, by the time you visit, they will finish the installation of the atmospheric shield so we can enjoy the outdoors on Mars. Hope to here from you soon!”
